TECHNICAL REPORT

CEN/TR 17320

RAPPORT TECHNIQUE

TECHNISCHER BERICHT

February 2019

ICS 93.100

English Version

Railway applications - Infrastructure - Determination of laboratory test parameters for assessing the mechanical durability of rail fastening systems - Complementary element

Applications ferroviaires - Infrastructure -
Détermination des paramètres d'essai en laboratoire
pour l'évaluation de la durabilité mécanique des
systèmes d'attache de rails - Élément complémentaire

Bahnwendungen - Infrastruktur - Bestimmung von
Laborprüfparametern zur Beurteilung der
mechanischen Dauerhaftigkeit von
Schienenbefestigungssystemen

This Technical Report was approved by CEN on 14 December 2018. It has been drawn up by the Technical Committee CEN/TC 256.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword		3
1	Scope	4
2	Normative references	4
3	Terms and definitions	4
4	Symbols and abbreviations	4
5	Purpose	4
6	History and background	5
6.1	ERRI D170 Reports; Evolution of the EN 13481 series	5
6.2	System testing v. component testing	6
6.3	Design v. actual loads	6
6.4	Selection of the appropriate hypothetical load case	7
6.4.1	General principles	7
6.4.2	Effect of rail inclination	7
6.4.3	Sleeper type	7
6.5	Safety and dynamic factors	7
6.6	Duration of test (3 million cycles) and loading frequency	7
6.7	Pass/fail criteria	8
6.8	Ballasted v. ballastless track	8
7	Assumptions about track construction and maintenance conditions	8
8	Input loading at wheel-rail contact point	9
8.1	Vertical Loads	9
8.2	Lateral loads - Relationship between lateral force and curve geometry	9
9	Distribution of loads	10
9.1	Vertical loads	10
9.2	Lateral loads	10
10	Experience in applying the EN 13481:2002 series and EN 13481:2012 series	11
11	Recommendations for future development of the EN 13481 series	11

European foreword

This document (CEN/TR 17320:2019) has been prepared by Technical Committee CEN/TC 256 “Railway applications”, the secretariat of which is held by DIN.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

CEN/TR 17320:2019 (E)

1 Scope

This document presents the technical basis for the loading conditions (the load magnitude, the load angle and the position of load application) to be used when performing the repeated load tests described by EN 13146-4. This basis consists of measurements made in-track, theoretical analysis and experience of using the previous versions of the EN 13481 series. Statistical variations in the applied loads and their influence on safety factors are also considered.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 13481-1:2012, *Railway applications – Track - Performance requirements for fastening systems – Part 1: Definitions*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 13481-1:2012 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

rail seat

single discrete rail fastening point e.g. a sleeper end or location of a single baseplate

4 Symbols and abbreviations

E	Young's Modulus of the rail steel
F	vertical component of load at a single rail seat
F_{\max}	load carried by the rail seat directly below the wheel
I	second moment of area of the rail for vertical bending
k	stiffness of the ("Winkler") foundation
V	maximum train speed [km/hr]
W	vertical wheel load
a	sleeper or support spacing

5 Purpose

This document has been prepared to provide a reference document that will inform future revisions of the EN 13481 series and other standards that define Performance Requirements for rail fastening systems. Specifically, it provides a basis for calculating the loads that should be applied in the repeated load tests that are performed in laboratories in order to confirm the durability of rail fastening systems according to the method given by EN 13146-4.
